Browser Security Platform

Securing Today's Window of Work

In today's distributed and dynamic digital landscape, the browser has emerged as today's Window of Work for employees accessing critical SaaS applications and data. The browser, although an essential consumer application used across all commercial contexts, has not received the same level of priority for security and administration as other crucial business assets or endpoints.

Multi-Tenant, Granular Visibility, Ease of Administration

The Atakama Browser Security Platform equips MSPs with a robust browser security solution, which enables end-users to access websites and SaaS applications effortlessly without compromising security. Embrace comprehensive browser protection, streamlined administration, and reduced complexity.

Purpose-built for MSPs, the Atakama Browser Security Platform is a browser extension that transforms the browser into a secure, managed workspace, empowering MSPs to control security, set data policies, gain insights, and optimize user experience—an evolution in browser management and security for today's Window of Work.

Say goodbye to fragmented solutions and unwieldy tool sprawl. Say hello to the Atakama Browser Security Platform, where security meets flexible work.

MSP Benefits

Multi-Tenant Architecture

Streamline user provisioning, administration, and co-managed environments effortlessly. Experience unparalleled tenant management through granular Role-Based Access Control (RBAC). Efficiency redefined.

Consumption-Based Pricing

Embrace growth without up-front commitments. Experience the advantage of pay-as-you-go, tiered pricing with no annual contract required.

Robust PSA Integrations

Eliminate the headache of month-end reconciliation. Atakama's robust API-based PSA integration ensures comprehensive monitoring, ticketing, and streamlined billing. Dive into comprehensive insights and ticket details that seamlessly integrate with your processing workflow.

Ease of Administration

Reduce the overhead of tenant management with an intuitive interface that simplifies policy settings, rule configuration, and efficient tenant management. The user-friendly interface facilitates seamless control, empowering MSPs to manage each tenant effectively and with ease.

Use Cases

Insights and Monitoring

Gain powerful insights through comprehensive reporting into browser activity, SaaS application usage, and productivity statistics. Reveal patterns and detect irregularities to facilitate diagnostics and remedial actions. Collect, measure, analyze, and report on browser and web application usage data. Uncover trends and identify anomalies for diagnostics and remediation.

Anti-Phishing, Anti-Malware, and DNS Filtering

Enable advanced browser protection with category-based content filtering for compliance, anti-phishing, anti-malware website filtering, and traffic filtering beyond the browser, to safeguard clients. Enable category-based content filtering to ensure compliance with corporate usage policies.

Browser Security Controls

Fortify your client's primary workspace—the browser—where end users access the internet and SaaS applications for their daily tasks. The browser is the new endpoint, and ensuring its security and integrity is essential for safeguarding your clients and ensuring their productivity. Timely management and enforcement of browser security settings, along with maintaining secure browser sessions, ensures users access websites and SaaS applications effortlessly without compromising security.

Credentials Analysis

Utilize browser-based credential analysis to detect irregularities or potential risks associated with password hygiene, thereby minimizing the chances of security vulnerabilities arising from weak and reused passwords. Gaining insight into users' website and application accounts for thorough user off-boarding procedures.

About

With enterprise-grade security built for the SMB, Atakama transcends the boundaries of conventional security with protection as fluid as your people, data, and critical assets. Say hello to user-centric security and management for today's Window of Work.
